

Kelly Lancaster

Year: 4

Advisor: Prof. Jean-Luc Brédas

School: Georgia Tech

Transfer. This unassuming action underlies the various aspects of my educational interests. In one form, it refers to the relocation of charge within a single molecule, as in organic mixed-valence compounds. In another, it means the movement of charge between two molecules, as in organic photovoltaic systems. It even comprises the transfer of knowledge to students eager to learn how the world works. And not surprisingly, it is the central theme of this, my STC research profile.
